

# DOOR 2 GO

By: Anna, Tarun, Mamta, Parth

## Project Summary:

We Provide an Online platform service through which registered users can get services at their door step.

## Technology Used:

**JavaScript:** Implemented on frontend and backend.

**Node JS:** Used as a server for connection of backend to frontend

**Express JS:** Framework of Node JS to connect to Mongo DB

**MongoDB:** Database for storing of information

**HTML and CSS:** Front end designing.

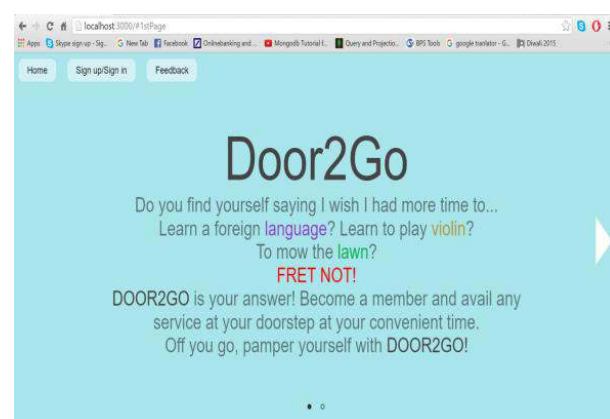

## Limitations:

We were unable to achieve functionality of web sockets due to resource constraints.

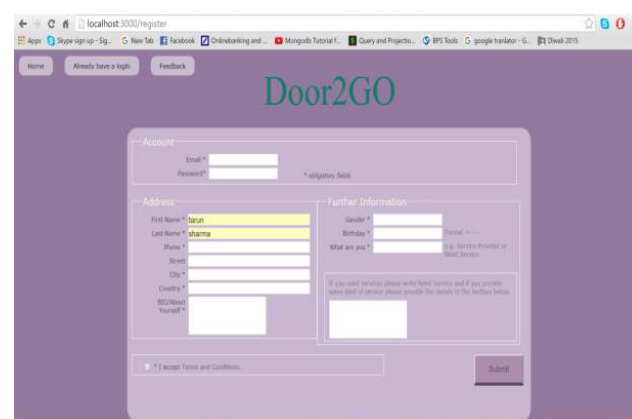

## Future Work:

We would try to develop the website more responsive with features such as video chat.
